

Spring Gnome Mobile

Take two 18" lengths of wire. Using a pair of needle nose pliers create a loop in the exact center of each wire. Next thread the loops together. Balance the top loop on the end of the pliers to make sure both wires are balanced. Trim any wire as needed. Use pliers to curve the end of each wire up into a small loop. Cut out characters and use glue stick to make them double sided. Use fishing line or clear thread to string them onto wire.
